

(a) Flat audit: all $K = 1, \dots, 12$ circles with exact $u = 5, 6, 7$ parabola tangencies

(b) Side audit: half-step $T = K/2$ shells and the $u = 5, 6, 7$ generator tangencies

(c) 3D audit: complete fixed- T circle family through the $x + y = 12$ boundary
